ABSTRACT OF THE DISCLOSURE

A system and method control intake air of an internal 1 combustion engine. The engine has at least one combustion 2 chamber provided with intake valves together with an intake 3 manifold provided with a throttle valve. The opening and closure 4 timings of the intake valves are adjustable entirely 5 independently by electromagnetic drivers from the crankshaft 6 position to control the amount of intake air supplied to the The system and method provide a combustion chamber. 8 response adjustment to variable valve timing control of the intake valves for unthrottled intake air control. 10
